# City of Regina

Regina is situated on lat. 50° 30', long. 105° on the main line of the Canadian Pacific Railway.

It is the capital of the province of Saskatchewan, the seat of government, and the headquarters of the judicial and departmental offices. It is also the seat of the federal government of the Dominion of Saskatchewan, and the seat of the Supreme Court.

The main line of the C. P. R. bisects the city. It is also the terminus of the southern railway, the Canadian Northern Railway, which runs through the city to the south. This is the longest piece of straight railroad on the continent, and is one of the longest in the Western Hemisphere, running for nearly 100 miles from Regina to the town of Sault Ste. Marie in an absolute straight line.

The C. P. R. has also under course of construction a line running north from Regina to the town of Brandon, which will be completed early in the present season. This not only gives easy access to Last Mountain Lake, which is one of the most beautiful and fertile in the province, but will also give Regina access to the great wheat and grain country, and will largely increase the business done by our wholesale houses.

Regina is the terminus of the C. N. R. line from Prince Rupert, and also the terminus of the same company's line from Brandon, which line being completed through to the Great Lakes gives Regina the benefit of a complete road through to the head of navigation.

Regina is the centre of the Provincial Government's long distance system, lines now being run direct from Regina to Saskatoon, the north and from Regina to Virdia in the southeast. The Provincial Government in 1966 purchased the entire Bell Telephone system in Saskatchewan. The Saskatchewan Telephon Company are the sole provider of Regina's long distance with Moose Jaw and a few long distance services are presently taken over by the Government. Saskatchewan's telephone system is now 100 per cent Government ownership.

Since the division of the North West Territories into the Provinces of Saskatchewan and Alberta the judicial situation has been changed, and the circuit court judges have been removed from the circuit and are now resident in the cities. The circuit court judges are now resident in the cities where they reside. Chambers are held daily.

It is held that the proper course is to leave the duty of determining the facts to the trier of fact, and to leave from any of the issues the case to the jury, and to rehear at the sitting of the Court en banc.

The demand of the Supreme Court judges residing in Regina, the Chief of Police, the various newspapers, the business and mercantile community and for some extent the only real library in the district has been in Regina. This has been increased from year to year and now requires any text book that now serves as a reference library for the majority of purposes and of trial in the courts and some of the complete library of the district in the province.

The Debye-Hückel limiting law is written as follows:

The financial value of the Provinces here

The following names are submitted here by the Govern-  
ment

The annual examination and marking of papers is done here.

The sewerage system in the city consists at present of twenty miles of sewer main at 1500 connections. The total capital expenditure on the system prior to 1933 is £83,333. No buildings are allowed to be erected without plans of the water and sewer main system, and sewer connections to the main sewerage already built have had to be put in the last 10 years as requiring such alterations to conform with the new sewerage system. At present new underground sewerage is being put in at a cost of £15.00 per average and disposal works rateable unit. As the population is increasing rapidly, as the present sewerage system is not sufficient to deal with the demand, sewers are now built for the purpose of increasing the capacity. As a consequence of the present sewerage system in Ascaton.

Reynolds' house, built in the year of its size, stood on the corner of the main street, and was a fine four-story building. The house was a fine example of the side walks and thirty-five miles of wood plank.

Being a young city it had the advantage of the experience of older ones. At the same time it had not confined itself to one kind of paper or one material, and it offered every kind of fine variety of color, from rich, asphalt blacks and grays to

granolithic sidewalk.

The streets are well maintained by a sanitary department and are kept scrupulously clean.

On the way to the city, we saw a large fountain in the middle of the city. It was very beautiful and had many trees around it. The water was very clear and the fountain was very high. It was a very nice sight and we all enjoyed it.

in the words

"A pleasant city on a boundless plain  
 Of air rich and sweet, peace and contentment reign  
 A legal camp, the province wisdom's home,  
 A rich cathedral, learning's splendid dome  
 A teaming mart, wide streets, broad squares, high flowers,  
 A marble figure whence a fountain showers  
 What city's this; A gentle princess famed  
 For happy genius it Regina named."

And his family come to out and today attests the prophet's vision fulfilled.

In different parts of the city grounds have been laid out for cricket, football, baseball, lacrosse and tennis while the city has about two hundred acres on the north side for park and recreation purposes. A splendid feature of the city is the children's playgrounds located in different parts of the city.

### WASCANA LAKE.

A body of water situated at the southern part of the city between the residential portion of the city and the parliament buildings, in length approximately seven miles and from three hundred yards to one-half mile in width. The first annual regatta of the Regina Boat Club was held on July 1st this year. Recent improvements have added greatly to the appearance of Wascana Lake and today it stands as one of Regina's valuable assets as a pleasure resort for canoeing, boating, bathing and so forth.

The new Parliament Buildings, over-looking the lake from the south side, are beautifully situated and when these are completed it will be difficult to find in Saskatchewan, a prettier spot.

Regina possesses a great feature in her Exhibition Grounds. They are admirably situated one mile west of the city on the north side of the Canadian Pacific Railway tracks. Spur track accommodation has been provided and the C. P. R. also run a fifteen minute passenger service when the occasion for such arises.

These grounds comprise some seventy six and one-half acres surrounded by a board fence eight and one-half feet high with two entrances at the east side with drive ways, also passenger train entrance and stock entrance located on the south side.

Improvements to the extent of \$2500000 were made this year and there are now two large mar buildings and two grand stands, fifteen well equipped horse and cattle stables, four race horse stables and a large arena for logging also a half mile race track complete in every detail and a large building used as the Secretary's office and numerous other smaller buildings. Water works and sewerage extend through the grounds and hydrants are placed in numerous parts of the grounds making a great convenience. All buildings are equipped with electric lights. The mar buildings and grand stands are illuminated with strings of incandescent lights.

The Dominion Exposition for the next year is to be held in Regina the first two weeks in August, 1911. Preparations for this important event have been going on steadily for nearly a year past. The advertising has assumed high proportions, citizens of Regina and all parts of Canada and the United States and even in Great Britain are being secured as exhibitors and visitors. A system of telegraph advertising has been put on foot. The city is being beautified and the exhibition ground

is being prepared for the reception of the thousands of people who will come to the city. The citizens out of the proceeds of the sale of their townsite lands. The city has also received a grant of \$10,000 from the Dominion Government for the purpose of erecting a new fire station. The new fire station is being erected on the corner of Cornwall and York streets. The cost of the new fire station is estimated at \$10,000. 1. *Chlorophyll a* (Chl *a*) is the primary photosynthetic pigment in most plants and algae. It is a green pigment that absorbs light energy in the blue and red regions of the visible spectrum. Chl *a* is essential for the light-dependent reactions of photosynthesis, where it converts light energy into chemical energy in the form of ATP and NADPH.

Is there a cost to being a member of a social network? We tested this question by comparing the health of 10,000 people who were members of a social network with the health of 10,000 people who were not members of a social network. The results showed that people who were members of a social network had a higher risk of dying from heart disease than people who were not members of a social network. This suggests that being a member of a social network may have a cost, at least in the case of heart disease.

Mathematical models of the system are presented in the next section. The results of the model are presented in the following section. The conclusions are presented in the final section.

Measures of the impact of the 1997-1998 Asian crisis on the U.S. economy are shown in Table 1. The U.S. economy was hit hard by the Asian crisis. The U.S. economy experienced a sharp decline in GDP, a significant increase in unemployment, and a significant increase in the trade deficit. The U.S. economy also experienced a significant increase in the interest rate and a significant decrease in the stock market. The U.S. economy also experienced a significant increase in the inflation rate and a significant decrease in the consumer confidence index.

Further, it is not clear that the  $\beta$ -phase is the only one that is stable at low temperatures. The  $\beta$ -phase is stable at low temperatures for the  $\text{Fe}_2\text{O}_3$ - $\text{Fe}_3\text{O}_4$  system, but for the  $\text{Fe}_2\text{O}_3$ - $\text{Fe}_3\text{O}_4$ - $\text{FeO}$  system, the  $\beta$ -phase is stable at low temperatures only for compositions with  $x < 0.5$ . For compositions with  $x > 0.5$ , the  $\beta$ -phase is stable at low temperatures only for compositions with  $x < 0.5$ . For compositions with  $x > 0.5$ , the  $\beta$ -phase is stable at low temperatures only for compositions with  $x < 0.5$ .
